Amendments to the Claims

1. (Currently amended) An apparatus for cleaning a surface within a vessel, the apparatus supported at least partially above a support surface and comprising:

an elongate combustion conduit extending from an upstream end to a downstream end associated with an aperture in a wall of the vessel and positioned to direct a shock wave toward said surface;

- a guide member on the support surface; and
- a plurality of support assemblies supporting the combustion conduit at a plurality of locations along a length of the combustion conduit and engaging the at least one guide member, each support assembly comprising a trolley having first and second pairs of wheels.
- (Currently amended) The apparatus of claim 1 wherein:
 the at least one guide member comprises at least one track; and
 each support <u>assembly</u> has at least one <u>said</u> wheel engaging the at least one track.
- 3. (Currently amended) The apparatus of claim 2 wherein: the at least one track comprises first and second spaced-apart rails; and each support assembly comprises said at least one pair of said at least one wheel wheels being first and second spaced-apart wheels.
- 4. (Canceled)
- 5. (Currently amended) The apparatus of claim [[4]] 3wherein: the combustion conduit comprises a plurality of separable segments; and each of the segments is supported atop a single associated one of the plurality of trolleys.
- 6. (Original) The apparatus of claim 1 further comprising:
 a fuel and oxidizer source coupled to the combustion conduit to deliver a charge to the conduit; and

Ser. No. 10/733,556

an ignitor positioned to ignite the charge to cause a deflagration-to-detonation transition for generating the shock wave.

- (Original) The apparatus of claim 1 further comprising:
 a resilient member coupling the combustion conduit to the wall.
- 8. (Original) A plurality of apparatus of claim 1 positioned at a given level of the vessel.
- (Original) The plurality of claim 8 wherein:
 the combustion conduits are oriented parallel to each other.
- 10. (New) The apparatus of claim 1 wherein:the combustion conduit comprises a plurality of separable segments; andeach of the segments is supported atop an associated trolley of the plurality of trolleys.
- 11. (New) The apparatus of claim 1 wherein: the combustion conduit comprises a plurality of separable segments secured end-to-end.
- 12. (New) The apparatus of claim 1 wherein:

 the combustion conduit comprises a plurality of doubly-flanged segments secured of end-to-end.
